ABSTRACTED-PUB-NO: JP2000045059A

BASIC-ABSTRACT:

NOVELTY - The copper foil is rolled so that it has composite skin layer of <a href="copper hydroxide">copper hydroxide</a> and cuprous oxide on foil surface. The roughness height of the copper foil in direction right angle to the rolling direction is set to 0.7 mu m or more. The heights between base line of orbital narrow band photoelectron spectrum of cuprous oxide and spectrum peak is set to different values so as to satisfy specific relation.

USE - Copper foil is used for flexible printed circuit board and for  $\frac{\text{electrodes}}{\text{of}}$  of lithium ion secondary battery.

ADVANTAGE - Has excellent adhesive capacity of coating materials like <u>carbon</u> on the surface of foil due to the rough skin layer of copper oxide and copper hydroxide.
